Privacy Policy & Terms of Service

The Legends Lab company
Last Updated: October 2026

Welcome to The Legends Lab company. We are dedicated to maintaining strict security protocols to protect your privacy rights while ensuring our software applications operate safely and seamlessly. This unified Privacy Policy and Terms of Service explains exactly how data is managed, our complete limitations of liability, copyright enforcement terms, and the absolute conditions governing the utilization of our products, services, and software applications (collectively referred to as "Services").

1. SCOPE OF APPLICATION AND SOFTWARE TYPES

To maximize user alignment and transparent structural transparency, our software Services are explicitly classified into two separate operational delivery modes:

- **Offline Standalone Applications:** Software built explicitly to perform computing, rendering, decoding, and processing tasks 100% locally on-device with zero internet connectivity and zero transmission dependencies (e.g., MAPlayer).
- **Connected/API Applications:** Software that interfaces with the internet to execute modern network features, securely fetch live content arrays, execute automated operations, or safely coordinate user requests via external Application Programming Interfaces (APIs).

2. DATA PROCESSING AND COLLECTION STANDARDS

Our processing guidelines vary depending strictly on the distinct functional architecture of the application being deployed:

- **For Offline Standalone Applications:** We do not collect, view, logs, monitor, transfer, store, or query any user personal records, usage telemetry matrices, or localized media assets. All media files, subtitles, and configuration inputs execute strictly inside your local device cache.
- **For Connected/API Applications:** To successfully execute operations, specialized connected features securely transfer minimal technical headers (such as encrypted request objects, standard IP protocols, or functional API variables). This ephemeral routing infrastructure is strictly utilized to process the operational feature and is never used to track, profile, or log consumer data.
- **Support Communication Logs:** If you voluntarily initiate support queries via email networks, we process your contact address and query metadata solely to fulfill technical resolutions. These diagnostic histories are securely retained only as long as required to clear the support request.

3. API ASSIGNMENT AND THIRD-PARTY DISCLAIMER

Our connected software architectures securely deploy certified API integrations hosted by independent third-party vendors. While we continuously require modern endpoint safety protocols, we have no absolute structural control over external data networks, infrastructure downtimes, or remote security systems. Users are explicitly instructed to consult the distinct structural privacy agreements published by any third-party infrastructure integrated within those specific remote interfaces. Under no circumstances does our company lease, share, or sell user records to advertising aggregators.

4. ABSOLUTE LIMITATION OF LIABILITY AND SYSTEM SAFETY DISCLAIMER

We deploy strict administrative protocols, robust encryption modules, and modern physical safeguards to protect information flows across our online services. However, no data system or cloud-based server network can guarantee absolute, 100% bulletproof invulnerability.

In the event of an external security breach, malicious unauthorized hack, data extraction event, severe system compromise, or accidental database leak, The Legends Lab company, its legal developers, founders, executives, partners, and corporate affiliates cannot and shall not be held legally accountable or liable for any direct, indirect, random, special, consequential, or exemplary damages, financial losses, operational delays, data losses, or legal costs arising out of or connecting with such security incidents. By deploying our Connected Applications, you formally acknowledge these clear architectural vulnerabilities and explicitly agree to navigate our remote services at your own independent option, discretion, and risk.

5. INTELLECTUAL PROPERTY AND COPYRIGHT LAW ENFORCEMENT

All software components, custom configurations, architectural structures, unique functional systems, core source codes, graphic designs, graphical user interfaces (UI), user experience frameworks, visual brands, vector assets, company names, and logos are the sole exclusive property of **The Legends Lab company** and are fully protected under all applicable international copyright codes, trademarks, intellectual property statutes, and patent regulations.

Strict Prohibition: Users, organizations, developers, and competing corporate entities are completely and strictly prohibited from copying, distributing, republishing, mining, modifying, selling, adapting, cloning, mirroring, or translating any portion of our software services or brand assets without explicit written authorization signed directly by our company founders.

Enforcement and Copyright Strikes: If any person, developer, or firm duplicates or steals our proprietary software designs, user experiences, codebase arrays, or matching assets on platforms including but not limited to the Google Play Store, Apple App Store, GitHub, or public hosting web addresses, **The Legends Lab company will immediately file urgent legal take-down actions, formal digital copyright claims, and Digital Millennium Copyright Act (DMCA) legal notifications.** Furthermore, we explicitly reserve the unmitigated legal right to initiate formal court filings, obtain immediate restraining demands, and pursue extensive damages against the violating entity to the fullest extent permitted by international law.

6. WARRANTY DISCLAIMER AND CORE USAGE RULES

Software Provided "AS IS": All technical programs and application binaries provided by our company are distributed strictly on an "AS IS" and "AS AVAILABLE" basis without any express or implied legal warranties of any type. We do not promise that our software features will operate entirely error-free, uninterrupted, or clear of localized software conflicts or unforeseen functional bugs.

Zero Operational Damage Liability: If a software runtime error, processing delay, system crash, configuration bug, or application malfunction causes localized hardware damage, device storage corruptions, files loss, missed business windows, or any form of secondary operational disruptions, our company holds absolute legal immunity and zero financial or structural liability.

Anti-Decompilation Clause: You are explicitly prohibited from decompiling, unzipping, decrypting, extraction-testing, cracking, modifying, packaging, or applying reverse-engineering mechanics to our native

application builds or dynamic server APIs. Any verified exploration of these prohibited mechanical testing workflows terminates all user rights immediately and exposes the violator to comprehensive structural copyright liability.

7. MANDATORY LEGAL CLAIMS AND CONTACT VERIFICATION

Users maintain the full sovereign authority to query, review, amend, or demand the absolute erasure of any customer support history logs connected to their identity within our system files. If any particular clause or condition within this corporate text is deemed legally unenforceable by a competent jurisdiction court, all remaining section structures will maintain their absolute valid authority without interruption.

For any verified inquiries, compliance confirmation steps, corporate policy updates, or direct communications regarding our global legal rules, please contact our official operations group at the following address:
